

Secure, Smart Printing

ProximityPrint Q (PPQ) is a comprehensive solution for secure, smart printing. Reduce costs, increase security, monitor printer usage, manage resources, and eliminate abandoned printouts.

With PPQ employees no longer need to run to a printer to get a secure document. There are no more abandoned documents that end up in the trash. Wasted expenses associated with personal printing are eliminated. And there's no need for personal printers for employees that print secure documents.

Benefits:

- Increase security by ensuring that no print job is accessed by a person other than the intended recipient
- Follow Me Printing
- Reduce waste associated with abandoned printouts
- Monitor print jobs to eliminate personal use
- Control printing transactions and analyze costs and usage with reporting tools
- Eliminate the need for personal printers

Researches show that up to 20% of printouts sent to a shared central printer are either not picked up, or picked up by a different person than the one sent it.

Product Highlights:

- Support any printer driver. No need to use generic drivers
- Easy to use web interface for print management
- Full integration with LDAP and SQL server for synchronization
- Reporting tools for print accountability
- Supports Microsoft Clustering
- Supports a wide range of copy machines: XEROX, HP, RICOH, Konica, Sharp, Samsung and many more

Product Overview

PPQ is composed of a physical device and a central server software.

When a user creates a job and sends it to the printer, the job is captured by the software and saved in the server. After the user is identified at the printer (by passing a card or entering a code), the software receive the identification and release the job.

The network administrator can monitor the employees printing, assign printers, and set limits for each user.
